

## **The Frontier Pitts Manual Barrier**

An easy to operate, counter-balanced manual barrier complete with lifting handle and locking 'L' bar at the pivot point, giving you the option to lock the barrier in the open position to allow free access and egress or in the lowered position to securely close the passageway.

The Frontier Pitts Manual Barrier is available with a boom length up to 10 meters and manufactured in the UK.

The heavy duty boom is constructed of extruded aluminium and finished as standard in white with red stripes, other colours are available upon request.

The pedestal and fixed end rest are both shot-blasted to clean metal, hot zinc sprayed and finished with a final coating of polyurethane paint giving it great resilience against the elements.

With minimal foundations of only 300mm Sq x 450mm deep it makes the Frontier Pitts Manual Barrier the ideal low cost traffic management solution.
